## About Gunze USA

Gunze is one of the world leaders in resistive touch panel manufacturing. Gunze USA is a division of Gunze Limited, Japan, a multibillion-dollar company and the largest manufacturer of resistive touch panels in the world, employing over 8,000 people who work together to achieve international leadership through innovation.

Gunze USA works with OEMs and system integrators to design both standard and custom touch panel solutions. In addition, the company manufactures a wide variety of standard panels and total interface solutions for consumer electronics, industrial, automotive, medical, mobile, and POS/retail kiosk applications.

## Film/Glass touch panels are the most commonly used transparent touch panel

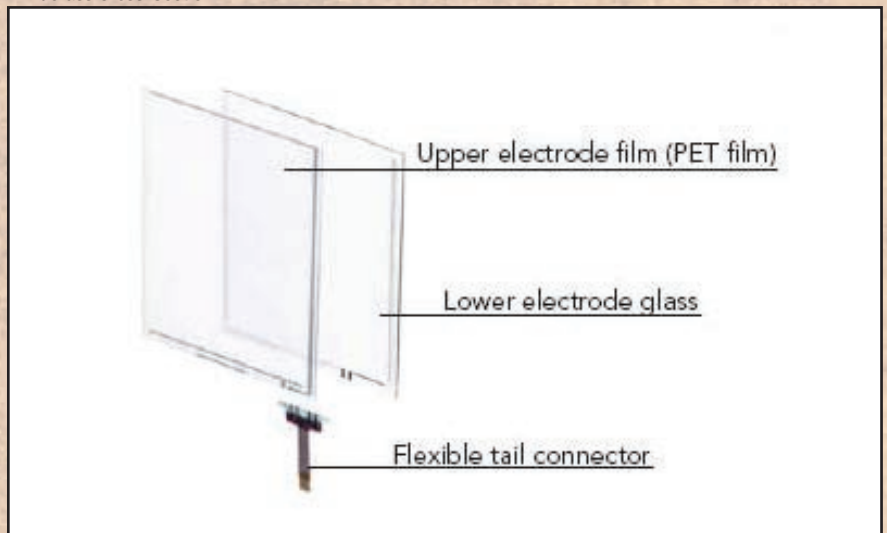

Film/Glass touch panels are used in countless devices and products. They are the foundation for every analog resistive touch product we manufacture, and are available in 4-, 5-, and 8-wire configurations.

Gunze touch panels are of the highest quality, with Gunze's reputation for quality, and years of touch panel manufacturing experience, built into every one. Our Film/Glass touch panels are a cost-effective way to integrate Gunze quality into your product.

Gunze Film/Glass touch panels offer excellent optical quality. We incorporate an anti-glare coating on the top film to minimize light reflected from the touch panel surface. We also have options for anti-fingerprint film, Anti-reflective film and different levels of Anti-glare

Gunze Film/Glass touch panels are available in a large number of standard touch panel designs. Odds are that we already have available a standard offering that can be incorporated into your designs. Offering a large selection of standard products enables Gunze to help provide you with options that help you minimize your project start-up costs. Gunze can also design custom Film/Glass touch panels for your specific application. Please contact a Gunze Sales Representative for assistance in finding the Film/Glass touch panel that's right for you.

Film/Glass Cross-Section
